②

Visual representation of evolution of energy prices in Europe

Temporal heat map of electricity prices with user adjustability of time

Time slider that affects graph

Visual representation of how everyday prices have been affected by the conflict

For this page, we plan on creating our own shelf with the objects we have price data for.

The objective is to visually understand how a common basket of everyday products can be affected by a conflict.

Clickable buttons

Example

SUGAR
- price before conflict = 2€ / kg
- price after conflict = 2.5€ / kg
